1.3 PC-驱动器连接

如果安装了合适的驱动软件,PC机可以直接通过控制模块上的操作面板接口对驱动器进行控制和调试,此软件可以在博能的官方网站下载。由于共用控制模块的操作面板接口,PC软件和OP25操作面板不能同时使用。后期将开发PC软件使用USB接口,以便支持PC软件和OP25共用。驱动器调试软件,可以为调试、优化和诊断提供菜单帮助向导。

1.3 PC-Drivers connection

If the appropriate driver software is installed, the PC can control and debug the driver directly through the operation panel of the control module. This software can be downloaded from the official website of BONENG. PC software and OP25 operation panel can not be used at the same time because they share the operation panel interface of control module. Later, PC software will be developed to use USB interface to support the sharing of PC software and OP25. Driver debugging software can provide menu help wizard for debugging, optimization and diagnosis.

2 PM25功率模块

2 PM25 Power Module

2.1 概述

2.1 Summary

PM25功率模块外形尺寸B1~B6

PM25 Power Module sizes B1 to B6.

PM25功率模块是为有安全保护要求的应用场合而设计的,与带有安全保护功能的控制模块组合使用,组成带有集成安全保护功能的驱动器。

PM25功率模块对直流母线电压有足够的控制范围,可以很容易地保证应用电压的变化。例如:动态缓冲功能(通过将负载的动能以再生方式回馈到直流母线来维持直流母线的电压)或者在电源故障后,通过利用负载生成的动能来控制并进行安全减速。此外,几个PM25功率模块可以通过 ([共直流母线]) 方式进行电气耦合。

PM25功率模块B1~B6规格可分为内置A级滤波器和未内置A级滤波器两种型号。功率模块PM25可在IT电网、TN电网、TT电网上运行,但内置了A级进线滤波器或者用户自配了B级进线滤波器的功率模块均不允许在IT电网、带有接地相线的TN电网、不带接地星点的TT电网上运行。

PM25功率模块B1~B6规格都集成了内置的制动单元(制动斩波器),外部制动电阻可以通过DC+和R直接接在驱动器上。

PM25 power modules are designed for applications with safety protection requirements. It is combined with the control module with safety protection function to form a driver with integrated safety protection function.

PM25 power modules have enough control range for DC bus voltage, which can easily ensure the change of applied voltage. For example: dynamic buffering function (maintaining the voltage of DC bus by regenerating the kinetic energy of load to DC bus) or controlling and slowing down safely by using the kinetic energy generated by load after power failure. In addition, several PM25 power modules can be electrically coupled in this way (common DC bus).

The specifications of PM25 power modules B1 to B6 can be divided into two types: built-in A-level filter and no built-in A-level filter. The power modules PM25 can operate in IT power grid, TN power grid and TT power grid, but the power modules with A-level incoming line filter or user's own B-level incoming line filter are not allowed to operate in IT power grid, TN power grid with grounding phase line and TT power grid without grounding star point.

PM25 power modules B1 to B6 are integrated with built-in brake unit (brake chopper), and the external brake resistance can be directly connected to the actuator through DC + and R.

● 进线滤波器

进线滤波器的作用是抑制驱动器通过输入电源线所传输到公共电网中的电磁干扰,同时也衰减从电源线进入驱动器的干扰;在安装时请尽量靠近驱动器的输入端子侧进行安装,请使用驱动器专用的进线滤波器。400V 50/60Hz A1系列驱动器可选的进线滤波器推荐型号如下表:

● Line filter

The function of the line filter is to suppress the electromagnetic interference transmitted from the driver to the public power grid through the input power line, and also to attenuate the interference from the power line into the driver; Please install as close to the input terminal side of the driver as possible, use the driver-specific line filter. The recommended models of optional line filters for 400V 50 / 60Hz A1 series drivers are as follows:

● 出线电抗器

当驱动器和电机之间的距离超过50米时,由于长电缆对地的寄生电容效应导致漏电流过大,驱动器容易频繁发生过流保护,同时为了避免电机绝缘损坏,须加输出电抗器补偿,输出电抗器可以减小电机绕组上的电压负载,以及采用长的电机电缆时,容性充放电电流加在功率部分的附加负载。400V 50/60Hz A1系列驱动器可选的输出电抗器推荐型号如下表:

● Output reactor

When the distance between the driver and the motor exceeds 50 meters, the leakage current is too large due to the parasitic capacitance effect of the long cable to the ground, and the driver is prone to frequent overcurrent protection. At the same time, to avoid damage to the motor insulation, output reactor compensation is required. The output reactor can reduce the voltage load on the motor windings, and when a long motor cable is used, the capacitive charge and discharge current is added to the additional load of the power section. The recommended models of optional output reactors for 400V 50 / 60Hz A1 series drivers are as follows:

● 制动电阻

制动电阻用于使大转动惯量的负载迅速制动。在电机和负载制动时，动能转换成的再生电能会返回到驱动器中，直流母线电压因此抬高，驱动器将这些再生的能量几乎全部消耗在制动电阻上；400V 50/60Hz A1系列驱动器可选的制动电阻推荐规格如下：

● Braking resistance

The braking resistor is used to quickly brake a load with large moment of inertia. When the motor and load are braked, the regenerative energy converted from kinetic energy will be returned to the driver, and the DC bus voltage will be raised. The driver will consume almost all of this regenerated energy on the braking resistor; The recommended models of optional braking resistor 400V 50 / 60Hz A1 series drivers are as follows:

3.1 概述

3.1 Summary

CM25控制模块举例

CM25 Control Module

CM25控制模块为驱动器提供闭环控制功能,作为通用功能设计,既可以提供V/f控制,也可以实现矢量控制。

这里,有以下几点需要注意:

- ◆ 闭环矢量控制(FVC)和无感矢量控制(SVC)都可以实现
- ◆ 工艺功能不断开发(已推出“防摇摆”功能,“随载适速”功能.....)

CM25 control module provides closed-loop control function for the driver. It can be used to implement all common applications involving V/F or sector control .

These points must be noted:

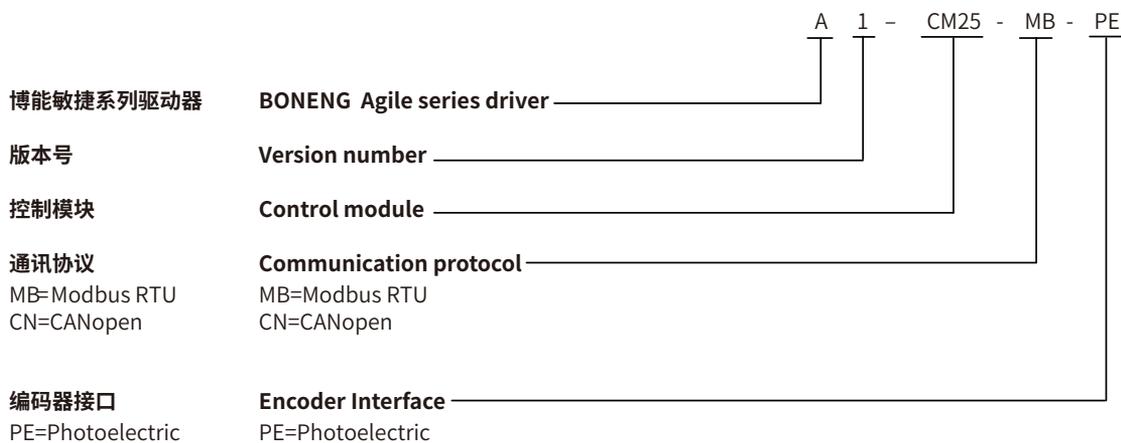

- ◆ Vector control (FVC) and Sensorless vector control(SVC) can both be achieved
- ◆ Continuous development of process functions. (Has introduced "Anti-swing"; "Speed with load" function, etc.)

6 OP25 Operation Panel

6.1 Summary

OP25操作面板举例

OP25 Operation Panel

通过菜单导航和128*64点阵LED显示屏,可以显示3行参数和1行状态显示,使得驱动器的调试变得非常简单,操作面板不仅可以同时显示参数名称和参数值,还具有参数过滤功能,这使得基本的驱动器调试变得简单容易,而且绝大多数的操作都无需纸质版说明书或参数手册。

通过操作面板的上、下、左、右、启动(RUN)、停止(STOP)、确认(OK)和返回(PRG/ESC)八个按键,可以方便地对驱动器参数进行本地设置。同时,操作面板上有一个专门的按键可以完成面板/远程的直接切换。

驱动器的故障诊断可以通过菜单的引导来完成,当前最新故障也会显示在主界面上直到故障消失或人为清除,提高了操作的便利性和安全性。

驱动器的当前参数可以拷贝到操作面板,并在必要的时候下载到相同类型的驱动器中。

操作面板的背光延时时间和屏幕显示对比度可设置。

OP25操作面板的工作温度为-10°C~+50°C

Through the menu navigation and 128*64 dot LED display screen, 3 rows of parameters and 1 row status can be displayed, making the debugging of the driver very simple. The operation panel can not only display the parameter name and parameter value at the same time, but also has the parameter filtering function, and most operations do not need paper manual or parameter manual.

The driver's parameters can be set locally through these 8 buttons: top, bottom, left, right, RUN, STOP, OK and PRG/ESC. At the same time, there is a specific button on the panel to complete the panel/remote direct switch.

The driver's faulty diagnosis can be accomplished through menu's guide, and the current latest fault will be displayed on the main page until eliminating the fault or clearing manually, which improves the convenience and security of the operation.

The current parameters of driver can be copied to the operation panel and downloaded to the same type of drive if necessary.

The backlight delay time and screen display contrast of the operation panel can be set.

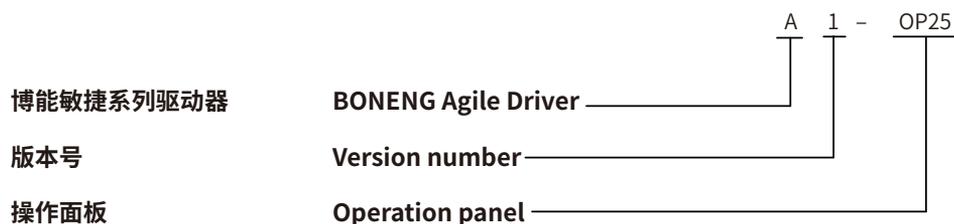

The working temperature of OP25 is 0°C~+50°C.
